STATOTHR

Enclosed is a copy of a report one of our men prepared from a plug cutout of the floor. The plotter will be placed on a similar foundation. I would appreciate it if you would distribute the load as required. There is no problem as to total weight on the floor loading.

The maximum dimension which we can accommodate moving the equipment into the building is 58" wide, 90" long and 80" high (including any truck or dollies).

We are definitely considering the installation of a vacuum pump in our service building to handle the plotter and several other items. It would appreciate knowing the exact vacuum requirements so that we may properly order.

If any other questions are raised before my next visit, please feel free to contact me.

Sincerely,

STATOTHR
